

The worlds first fully configurable modular system

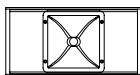

The QUBE System owes its origins to the legendary DARE Nx Series of speakers, the Nx series was probably the most highly acclaimed series of the generation, and for over 8 years received award after award. However the market place has changed and the ultra efficient Nx Range proved to be not flexible enough in today's world.

Whether you are designing a sound system for a Club, bar, restaurant or theatre no two venues are the same. Audience size can vary from a couple of hundred to many thousands. Every situation requires a loudspeaker system tailored to suite it. In recent years the standard trapezoidal cabinet has taken centre stage with almost every loudspeaker manufacturer, however this type of design does not accommodate for the varying requirements of high power installation systems.

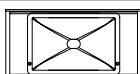

The QUBE System address's both problems, by providing the sound designer with a pallet of driver options, in a easily configurable, close coupling shell format, the modules are compact and fully line array ready, so whether you have a high or low ceiling, small or large room - the various permutations to achieve your acoustic design "targets" are all within easy grasp.

We have been very careful to ensure, each loudspeaker driver can perform to our demanding engineering requirements, combined with our SMART Flying system which couples each module together, whilst providing integral flying points, plus our renowned in-house cabinet manufacturing, we have a no compromise, sonic engineering and aesthetic solution, that many a discerning high power sound system designers could only dream of.

At the heart of the QUBE concept are only two outer shells, the main QUBE module is exactly a 600mm x 600mm and 480mm deep QUBE which is designed to accommodate various components, the second shell - the Demi-QUBE, is designed to accommodate certain Mid and High frequency components, when two Demi-QUBE's are combined, they form exactly the same dimensions as the larger QUBE. This unique concept allows for the first time in Pro-Audio complete integration of all the possible permutations

QUBE System

Features

- The only speaker system currently available that can be completely tailored to any venue
- High SPL / Efficiency levels.
- All models available with advanced Neodymium Magnet drivers
- Total Design Flexibility
- Line Array Design compatible
- Unique SMART flying system.
- Digital Actively Controlled
- Available in any BS, RAL or Pantone® colour
- Simple Installation and maintenance
- Unique Curved QUBE Cabinet
- Expanded steel Grill, with transparent foam covering.
- Five-Year Warranty

Applications

- Larger Theme Bars
- Large Discotheques and Dance Events/Clubs
- Live concerts
- Stadium & Sports Halls
- Hi-Fi Quality Foreground Music.
