

POD™ RT™ SERIES

The POD RT Series is the natural progression from the award winning Eclipse Series, and incorporates the patented Tractrix™ horn device, and therefore gives unprecedented levels of audio quality.

The series consists of several modules designed in a building block type philosophy, consisting of:

POD-2 Passive
POD-2 Active
POD-2 Passive Wafer
POD-2 Active Wafer

RT-1 Bi Amp
RT-1 Tri Amp
RT-1 Bi Amp Wafer
RT-1 Tri Amp Wafer

RT-1 Single Sub
RT-1 Twin Sub

RT-1 & RT-1 Tri Amp

The RT-1 is an Active/Passive 3 way full-range enclosure that is also available in a tri-amped version – RT-1Tri, utilising the patented POD Mid-Hi™ device in an unusually powerful one-box format.

Custom drive units are used exclusively, comprising: one 15" Neo Spyder™ bass driver, one 6.5" Aerogell™ Mid driver, and a V7 1" compression driver, which are each loaded in to the POD™ Tractrix™ Mid-Hi™ advanced composite moulding.

POD-2 Active-Passive

The POD-2P is the Passive 2 way Mid-Hi-Pod that is also available in a bi-amped version – POD-2A, utilising the patented POD Tractrix™ Mid-Hi™ device in an unusually powerful and uniquely styled pod format.

Custom drive units are used exclusively, comprising one 6.5" Aerogell™ Mid driver, and a V7 1" compression driver, which are each loaded in to the POD™ Tractrix™ Mid-Hi™ Horn.

The POD-2 is a dedicated installation version of the RT-1, designed specifically to fit into many types of venue ranging from clubs and theatres to sports stadia. The loudspeaker does not rely on a traditional cabinet for its acoustic performance, therefore the enclosure has been eliminated in order to address acoustic, cost and weight issues, the cabinet is replaced by a sonically maximised rear pod, minimising the usual standing wave – reverberation and resonance problems.
